Exercise:7 240701595 vishaali R

Experiment with different layouts and color schemes for an app. Collect user feedback on aesthetics and usability using GIMP(GNU Image Manipulation Program (GIMP)

AIM:

The aim is to trial different app layouts and color schemes and evaluate user feedback on aesthetics and usability using GIMP.

PROCEDURE:

Tool Link: https://www.gimp.org/

Step 1: Install GIMP

- **Download and Install:** Download GIMP from GIMP Downloads and install it on your computer.

Step 2: Create a New Project

1. **Open GIMP:**
    - Launch the GIMP application.
2. **Create a New Canvas:**
    - Go to File -> New to create a new project.
    - Set the dimensions for your app layout (e.g., 1080x1920 pixels for a standard mobile screen).

Step 3: Design the Base Layout

1. **Create the Base Layout:**

- Use the Rectangle Select Tool to create sections for different parts of your app (e.g., header, content area, footer).
- Fill these sections with basic colors using the Bucket Fill Tool.

Example Output: A base layout with defined sections for header, content, and footer.

2. **Add UI Elements:**
    - **Text Elements:** Use the Text Tool to add text elements like headers, buttons, and labels.
    - **Interactive Elements:** Use the Brush Tool or Shape Tools to draw buttons, input fields, and other interactive elements.

Example Output: A layout with labeled sections and basic UI elements.

3. **Organize Layers:**
    - Use layers to separate different UI elements. This allows you to easily modify or experiment with individual components.
    - Name each layer according to its content (e.g., Header, Button1, InputField).

Step 4: Experiment with Color Schemes

1. **Create Color Variants:**
    - **Duplicate Layout:** Duplicate the base layout by right-clicking on the image tab and selecting Duplicate.
    - **Change Colors:** Use the Bucket Fill Tool or Colorize Tool to change the colors of the UI elements in each duplicate.

Example Output: Multiple color variants of the same layout.

2. **Save Each Variant:**
    - Save each color variant as a separate file (e.g., Layout1.png, Layout2.png, etc.).

- Go to File -> Export As and choose the file format (e.g., PNG).

Step 5: Collect User Feedback

1. **Prepare a Feedback Form:**
   - **Create Form:** Create a feedback form using tools like Google Forms or Microsoft Forms.
   - **Include Questions:** Include questions about the aesthetics and usability of each layout and color scheme.
2. **Share the Variants:**
   - **Distribute Files:** Share the image files of the different layouts and color schemes with your users.
   - **Provide Instructions:** Provide clear instructions on how to view each variant and how to fill out the feedback form.
3. **Gather Feedback:**
   - Collect responses from users regarding their preferences and suggestions.
   - Analyze the feedback to determine which layout and color scheme are most preferred.

Step 6: Iterate and Refine

1. **Refine the Design:**
   - Based on the feedback, make necessary adjustments to the layout and color scheme.
   - Experiment with additional variations if needed.
2. **Final Testing:**
   - Conduct a final round of testing with the refined design to ensure usability and aesthetic satisfaction.

Outcome:

Rectangle Select
Antialiasing
Feather edges
Rounded corners
Expand from center
Fixed Aspect ratio
1:1
Position: px
462
152
Size: px
0
0
Highlight
No guides
Auto Shrink
